

Total Station Autocollimator - E

- An upgraded device based on our already mature technology for testing and adjusting fully integrated systems including mechanics, optics, and lasers.
- Emerging optomechatronics AR/VR industry has introduced special applications requirement:
 - Interalignment and testing of lasers, optics, mechanics and electronic sensors
 - Angular accurate optical measurements with resolution of 0.01 arc sec or better.
 - Implementing fusion of several wavelengths including NIR into one system.
 - Measurements from remote mechanical dimensions.
 - Centering & Alignment
 - Measurements of multi laser array such as VCSEL in respect with other optical sensors
- Our Total Station Autocollimator does it all and much more, including projection of virtual objects from user defined distance.
